

Zero Sum RPG Scenario: Operation Deepfake Fable

Real-World Inspiration (June 2026)

This scenario was generated by the `zero-sum-scenario-generator` skill based on real-world news: 1. The restriction of the highly advanced "Fable" AI model due to jailbreak and national security concerns. 2. Massive 1.3 TB corporate data breaches by groups like ShinyHunters and FulcrumSec. 3. The rise of coordinated, malicious AI deepfakes targeting high-profile female influencers and politicians.

Background

The advanced, restricted AI model code-named "FABLE-9" was stolen from a secure server farm by a data-broker cartel. They sold the weights to "**Viper**", a radical, highly charismatic tech-influencer with over 40 million parasocial, fanatical followers. Viper is currently barricaded in a luxury penthouse in downtown Seattle.

Viper is using FABLE-9 to generate hyper-realistic, career-ending deepfakes of global politicians and rival influencers, holding them for ransom. If the ransom isn't paid, the deepfakes are broadcasted live to the 40 million followers.

The Zero Sum Twist (The Hook)

The players are hired by a coalition of blackmailed victims to delete the FABLE-9 weights and neutralize Viper. However, Viper has weaponized her audience. Over 5,000 fanatic followers are currently camping outside her luxury high-rise, creating a massive, impenetrable human shield. If the players use traditional PMC tactics (guns, explosions), they will cause a civilian massacre, instantly

raising their Heat Level to maximum and causing a permanent burnout.

Zero Sum Consistency Matrix (ZSCM)

To ensure theoretical mathematical balance, this scenario is audited against the ZSCM matrix: * **E (Lethality Expectation) = 4:** The followers are mostly unarmed, and Viper relies on digital defense. Direct firefights are rare but extremely dangerous if escalated. * **R (Resource Scarcity) = 7:** Players cannot bring heavy weapons or tactical gear without alerting the civilian swarm. They must rely on concealed items and social engineering. * **I (Intel Asymmetry) = 8:** Viper controls the building's digital infrastructure and the public narrative. She sees everything through her followers' smartphone cameras. * **D (Collateral Damage Risk) = 10:** The highest possible rating. The "Dead Man's Zone" rule is constantly active. One misplaced flashbang or gunshot could trigger a deadly stampede or a mass doxxing attack.

Total ZSCM Score = 29/30 (Thematically Hardcore, but Winnable).

Key NPCs

- **Viper (Digital Demagogue):** Charismatic, narcissistic, highly paranoid. She relies entirely on her "Swarm" for protection.
- **The Swarm (Environmental Hazard):** 5,000 civilians. They act as a massive sensory network. If they spot the players, they won't shoot—they will surround them, film them, dox them, and physically crush them.
- **Aegis Corporate Security:** The building's actual security force, who are overwhelmed by the followers and currently locked in the lobby, terrified of sparking a riot.

Objective

1. Bypass the 5,000-person civilian swarm without triggering *Social Heat*.

2. Infiltrate the penthouse via unconventional means (e.g., BASE jumping from an adjacent building, or deep-cover social engineering).
3. Hack Viper's offline servers to delete FABLE-9 (requires extensive Downtime decryption to bypass the Zero-Trust Data logic bombs).
4. Extract without Viper directing the Swarm to tear you apart.
